

Unitronics' UniStream® 5" are PLC+HMI All-in-One programmable controllers that comprise built-in HMI and built-in I/Os.

The series is available in two versions: UniStream 5" and UniStream 5" Pro. Note that model numbers including:

- B5 refer to standard UniStream 5"
- B10 refer to UniStream 5" Pro  
 B10 models offer additional features, detailed below.

Note that below, if the letter "x" appears in the model numbers, it means that the section refers both to B5 and B10 models.

Certain models comprise built-in I/O configurations, as shown in the next table. This document provides the specifications for the I/Os.

Installation Guides are available in the Unitronics Technical Library at [www.unitronicsplc.com](http://www.unitronicsplc.com).

Power Supply	US5-Bx-RA28	US5-Bx-TA30
Input voltage	24VDC	24VDC
Permissible range	20.4VDC to 28.8VDC	20.4VDC to 28.8VDC
Max. current consumption	0.48A@24VDC	0.44A@24VDC
Isolation	None	

Display	
LCD type	TFT
Backlight type	White LED
Luminous intensity (brightness)	Typically 350 nits (cd/m <sup>2</sup> ), at 25°C
Backlight longevity <sup>(2)</sup>	30k hours
Resolution (pixels)	800 x 480 (WVGA)
Size	5"

Viewing area	Height x Width (mm) 108 x 64.8
Color support	65,536 (16bit)
Surface treatment	Anti-glare
Touch screen	Resistive Analog
Actuation force (min)	> 80 g (0.176 lb)

General	
I/O support	Up to 2,048 I/O points
Built-in I/O	According to model
Local I/O expansion	To add local I/Os, use UAG-CX I/O Expansion Adapters <sup>(3)</sup> . These adapters provide the connection point for standard UniStream Uni-I/O™ modules.
Communication ports	
Built-in COM ports	Specifications are provided below in the section Communications
Add-on Ports	Add up to 3 ports to a single controller using Uni-COM™ UAC-CX Modules <sup>(4)</sup> .

Internal memory	UniStream 5"	UniStream 5" Pro
		RAM: 512MB ROM: 3GB system memory 1GB user memory
Ladder memory	1 MB	
External memory	microSD or microSDHC card Size: up to 32GB Data Speed: up to 200Mbps	
Bit operation	0.13 μs	
Battery	Model: 3V CR2032 Lithium battery <sup>(5)</sup> Battery lifetime: 4 years typical, at 25°C Battery Low detection and indication (via the HMI and via System Tag).	

Audio (UniStream 5" Pro B10 models only)	
Bit Rate	192kbps
Audio compatibility	Stereo MP3 files
Interface	3.5mm Audio-out jack - use shielded audio cable of up to 3 m (9.84 ft)
Impedance	16Ω, 32Ω
Isolation	None

Video (UniStream 5" Pro B10 models only)	
Supported Formats	MPEG-4 Visual , AVC/H.264

**Communication (Built-in Ports)**

Ethernet port	
Number of ports	1
Port type	10/100 Base-T (RJ45)
Auto crossover	Yes
Auto negotiation	Yes
Isolation voltage	500VAC for 1 minute
Cable	Shielded CAT5e cable, up to 100 m (328 ft)
USB device <sup>(6)</sup>	
Number of ports	1
Port type	Mini-B
Data rate	USB 2.0 (480Mbps)
Isolation	None
Cable	USB 2.0 compliant; < 3 m (9.84 ft)
USB host	
Number of ports	1
Port type	Type A
Data rate	USB 2.0 (480Mbps)
Isolation	None
Cable	USB 2.0 compliant; < 3 m (9.84 ft)
Over current protection	Yes

**Digital Inputs**

Number of inputs	14
Type	Sink or Source
Isolation voltage	
Input to bus	500VAC for 1 minute
Input to input	None
Nominal voltage	I0-I9: 24VDC @ 6mA I10-I13: 24VDC @ 8mA
Input voltage	
Sink/Source	On state: 15-30VDC, 4mA min. Off state: 0-5VDC, 1mA max.
Nominal impedance	I0-I9: 4k $\Omega$ I10-I13: 3k $\Omega$
Filter	I0-I9: 6ms typical I10-I13: 5.5 $\mu$ s, 50 $\mu$ s, 0.5ms, 6ms, 12ms

High speed inputs <sup>(1)</sup>	
Frequency / Period	Pulse/Direction mode: 90kHz max. / 11.1 $\mu$ s min ( $t_p$ in the Pulse/Dir Mode figure below). Quadrature mode: 80kHz max. / 12.5 $\mu$ s min ( $t_p$ in the Quadrature Mode figure below).
Pulse width	Pulse/Direction mode: 5.1 $\mu$ s min. for each state ( $t_w$ in Pulse/Dir Mode figure below). Quadrature mode: 2.5 $\mu$ s min. for each state ( $t_w$ in Quadrature Mode figure below).
Cable	Shielded twisted pair

Quadrature Mode

Pulse/Direction mode

<b>Relay Outputs (US5-BX-RA28)</b>	
Number of outputs	8
Output type	Relay, SPST-NO (Form A)
Isolation groups	Two groups of 4 outputs each
Isolation voltage	
Group to bus	1,500VAC for 1 minute
Group to group	1,500VAC for 1 minute
Output to output within group	None
Current	2A maximum per output (Resistive load)
Voltage	250VAC / 30VDC maximum
Minimum load	1mA, 5VDC
Switching time	10ms maximum
Short-circuit protection	None
Life expectancy <sup>(17)</sup>	100k operations at maximum load

<b>Source Transistor Outputs (US5-Bx-TA30)</b>	
Number of outputs	10
Output type	Transistor, Source (pnp)
Isolation voltage	
Output to bus	500VAC for 1 minute
Output to output	None
Outputs power supply to bus	500VAC for 1 minute
Outputs power supply to output	None
Current	0.5A maximum per output
Voltage	See Source Transistor Outputs Power Supply specification below
ON state voltage drop	0.5V maximum
OFF state leakage current	10 $\mu$ A maximum
Switching times	Turn-on/off: 80 $\mu$ s max. (Load resistance < 4k $\Omega$ )
PWM Frequency <sup>(18)</sup>	O0, O1: 3kHz max. (Load resistance < 4k $\Omega$ )
Short-circuit protection	Yes

<b>Source Transistor Outputs Power Supply (US5-Bx-TA30)</b>	
Nominal operating voltage	24VDC
Operating voltage	20.4 – 28.8VDC
Maximum current consumption	30mA@24VDC Current consumption does not include load current

Analog Outputs			
Number of outputs	2		
Output range <sup>(19)</sup>	<b>Output Type</b>	<b>Nominal Values</b>	<b>Over/Under-range Values *</b>

Size	Refer to the images below	

**5" Panel**

**Notes:**

1. Four of the digital inputs (I10-I13) may be configured to function either as normal, or as high speed digital inputs, that can receive high speed pulse signals from up to two sensors or shaft encoders.
2. Panel's longevity is the typical operating time after which the brightness drops to 50% of its original level.
3. UAG-CX Expansion Adapter Kits comprise a Base unit, an End unit, and a connecting cable. You plug the Base Unit into the controller's I/O Expansion Jack and connect standard UniStream Uni-I/O™ modules. For more information, refer to the product's installation guide and technical specifications.
4. Uni-COM™ CX modules plug directly into the Uni-COM™ CX Module Jack on the back of the controller.  
 UAC-CX modules may be installed in the following configurations:
  - If a module comprising a serial port is plugged directly into to the back of UniStream®, it may be followed only by another serial module, for a total of 2.
  - If your configuration includes a CANbus module, it must be plugged directly to the back of UniStream. The CANbus module may be followed by up to two serial modules, for a total of 3. For more information, refer to the product's installation guide and technical specifications.
5. When replacing the unit's battery, make sure that the new one has environmental specifications that are similar or better than the one specified in this document.
6. The USB device port is used to connect the device to a PC.
7. The 4-20mA input option is implemented using 0-20mA input range.
8. The analog inputs measure values that are slightly higher than the nominal input range (Input Over-range).

Note that when the input overflow occurs, it is indicated in the corresponding I/O Status tag while the input value is registered as the maximum permissible value. For example, if the specified input range is 0 ÷ 10V, the Over-range values can reach up to 10.15V, and any input voltage higher than that will still register as 10.15V while the Overflow system tag is turned on.

9. The diagnostics results are indicated in the system tags and can be observed through the UniApps™ or the online state of the UniLogic®.
10. Step response and update time are independent of the number of channels that are used.
11. Note that the diagnostics results are also indicated in the system tags and can be observed through the UniApps™ or the online state of the UniLogic®.
12. The controller inherently supports 3-wire sensors.  
 4-wire sensors may be connected by utilizing 3 of the sensor wires; in-order to achieve the specified performance, all sensor wires shall be of identical type and length just as with a 3-wire sensor connection.  
 2-wire sensors may also be connected; performance in this case will degrade because of the wires` resistance.  
 Refer to the controller installation guide for detailed installation instructions.
13. The controller temperature inputs measure values that are slightly higher or lower than the nominal input range (Input Over/Under-range respectively).  
 Note that when input Overflow, Underflow or a connection fault occurs, it is indicated in the corresponding I/O Status tag (refer to the UniLogic® help for details) while the input value is registered as follows:

<b>Fault Type</b>	<b>Registered Value in the Input Tag</b>
Overflow	32,767
Underflow	-32,767
Connection fault	-32,768

14. For temperature measurement, the value is represented in 0.1° units. For example, a temperature of 12.3° is represented as 123 at the Value tag.

15. The overall accuracy for thermocouples is a combination of the per-sensor specified accuracy and the thermocouple cold junction error specification.
16. Sensor connection fault check is active by default for temperature, resistance and mV measurements. This may interfere with some test equipment like RTD, thermocouple, resistance and voltage simulators and thus may induce reading errors or cause malfunction of the test equipment and/or the controller.  
In order to interoperate correctly with such equipment, you may set the Disable Fault Detection I/O tag. This will disable connection fault check for all inputs.  
Note that when this tag is set, the controller will not check, or report, connection faults; thus, the reading in such case is unpredictable.
17. Life expectancy of the relay contacts depends on the application that they are used in. The product's installation guide provides procedures for using the contacts with long cables or with inductive loads.
18. Outputs O0 and O1 can be configured as either normal digital outputs or as PWM outputs. PWM outputs specifications apply only when outputs are configured as PWM outputs.
19. The controller analog outputs are able to output values that are slightly higher or lower (if applicable) than the nominal output range (Output Over/Under-range respectively).
